

Agriculture Depends on **Quality Water**

Reliable, high-quality water for land and livestock.

Agriculture in Kentucky depends on large quantities and reliable access to water for the cultivation of crops, raising livestock and maintaining sustainable farmland.

Louisville is an ideal location for farming and agriculture due to its fertile soil, climate and access to an abundant supply of water. The Ohio River provides high-quality, mineral-rich water to support livestock and crops.

>50% of Kentucky's land is used for agriculture

69,000+ farms across the Commonwealth

12.4 million acres across the state supported with water[®]

178,000 gallons of water used daily to support agriculture in Louisville

Agriculture Depends on Quality Water

Water Grows Kentucky's Economy

By providing great tasting, safe water, Louisville Water is the lifeline of Kentucky's top industries. Louisville Water partners with several local economic development agencies, utilities and state partners to ensure your business succeeds in Louisville.

Abundant Source of Water

With 75 billion gallons of water passing by Louisville daily, the Ohio River gives Kentucky businesses peace of mind knowing that the water they need to operate will be there when they need it. Louisville Water produces 138 million gallons of drinking water daily, which is less than 1% of the daily Ohio River flow.

Investment in Kentucky

Louisville Water ranks as one of the nation's premier water utilities, with rates among the lowest in the region. Louisville Water and its partners are investing nearly \$123 million in infrastructure upgrades to water systems in Kentucky, serving as a model for future partnerships and economic growth.
