

Manufacturing Depends on **Quality Water**

Kentucky's top industries depend on water.

Water plays an important role at multiple stages of the manufacturing process for nearly every manufacturing product. Manufacturers need reliable access to water for processing, cooling, cleaning, transportation of materials and product development.

Louisville is an ideal location for manufacturers because of its location along the Ohio River – providing an abundant, reliable supply. The Ohio River allows Louisville Water to deliver high quality water at a cost-effective rate to leading manufacturers in the Commonwealth.

Manufacturing Depends on **Quality Water**

Water Grows Kentucky's Economy

By providing great tasting, safe water, Louisville Water is the lifeline of Kentucky's top industries. Louisville Water partners with several local economic development agencies, utilities and state partners to ensure your business succeeds in Louisville.

Abundant Source of Water

With 75 billion gallons of water passing by Louisville daily, the Ohio River gives Kentucky businesses peace of mind knowing that the water they need to operate will be there when they need it. Louisville Water produces 138 million gallons of drinking water daily, which is less than 1% of the daily Ohio River flow.

Investment in Kentucky

Louisville Water ranks as one of the nation's premier water utilities, with rates among the lowest in the region. Louisville Water and its partners are investing nearly \$123 million in infrastructure upgrades to water systems in Kentucky, serving as a model for future partnerships and economic growth.
